

Whether it's an accidental deletion or a hard drive failure, losing your files is easy to do. The best way to protect yourself is with a cloud backup plan. Corruption or loss of data can occur at any time. Your business continuity starts with a good backup strategy, which will protect your organization against data loss and ensure a rapid recovery of operations when disaster strikes.

With Noxent's online backup solution, you protect your data by storing them into Microsoft Azure. Our Operation Center ensures a complete management of the service, for your serenity. You can safely restore your data, servers, and applications at any time to any hypervisor.
